Python Programming Guide

Topic: Variables

Python variables store values.

You do not need to declare a variable's type explicitly.

Example: student_name = "Priya"

Python Programming Guide

Topic: Lists

A Python list stores multiple items in an ordered collection.

Lists are mutable, meaning their contents can be changed.

Example: skills = ["Python", "SQL", "Pandas"]

Python Programming Guide

Topic: Functions

Functions are reusable blocks of code defined using def.

Functions can accept parameters and return results.

Example: def add(a, b): return a + b
